Rates vary according to the Paris Arrondissement, charging time and station's rated power

Discounted night-time rates for Paris residents who hold a subscription

Rates designed to encourage reasonable space turnover to improve charging access for all e-vehicle users

Available soon in underground car park hubs

To each their own Belib'

1 Michel FLEX offer

Owns an electric car
Uses Belib' frequently
Paris Resident

Michel lives in the 19th Arrondissement of Paris. He has taken out an annual Belib' subscription for just €7. He travels 200 km per week on average - a single full charge is enough (35 kWh). He charges his electric vehicle one night a week at a 7 kW station. With Belib', Michel spends an average of €30 per month to charge his electric vehicle and drive up to 800 km!

2 Adèle FLEX offer

Owns an electric car
Use Belib' occasionally
Visits Paris once a month

Adèle works as a sales rep and occasionally comes to Paris for work. She charges her electric vehicle in the city centre once a month, plugging into a 7 kW terminal for 4 hours, enough for an 80% battery charge. She hasn't subscribed to the Belib' service, and pays on average €13 per month.

3 Louis MOTO offer

Owns an e-scooter
Uses Belib' frequently
Paris Resident

Louis, a student, lives in Paris and has taken out an annual Belib' subscription for just €7. He mostly moves around the city on his electric scooter, which he charges about twice a week for 2 hours, over his lunch break. Louis spends an average of €5 per week for his kilowatt top-up - about €20 per month for his two-wheeler trips.

4 Rose et Charles BOOST offer

Rent a car
Use Belib' occasionally
Tourists

Rose and Charles are just visiting Paris. They are highly sensitive to environmental issues and prefer to travel by electric car. To make the best of their visit, they have chosen to top-up their battery at a fast charging station (22 kW). They will spend about €10 for their two-day stay.

Full rate schedule available on our website at www.belib.paris

Charging your batteries with Belib' is easy and multimodal!

Just follow the guide!

Our eco-responsible tips for optimised charging

Keep track of time

Charging time depends on:

- Your battery's capacity
- The station's rated power
- Your battery's charge level when charging
- Your vehicle's intake capacity, which might limit the power delivered by the station (AC and DC).

Stay vigilant and responsible

Pay attention! **Sometimes, you will continue to be billed even after your vehicle is fully charged!**

Once you have finished charging, unplug your vehicle and vacate the space to free up the charging station and stop the billing cycle.

80%

100% is great, 80% is better

An 80% charge is sufficient for typical daily use.

Above 80%, charging power is reduced, so the last kW/h will cost you more. It's best to wrap up your charging session and vacate the station.

Let's keep in touch!
